
Quick Editing Topic Parameters

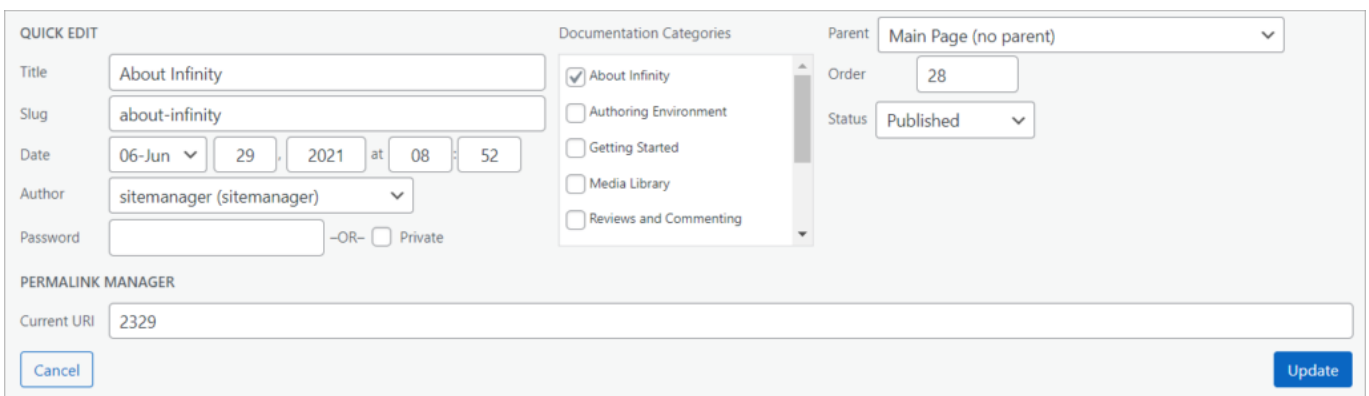

The Quick Edit feature lets you quickly edit certain important parameters of a topic without the need to open the topic in full Edit mode.

To quick edit the topic parameters:

1. Go to **Documentation > All Documentation**.
2. Click **Quick Edit** for the topic for which you want to edit the parameters.

3. Some important parameters that you can change in the Quick Edit mode are:
 - Title of the topic
 - Category
 - Parent topic (to fit the topic in a hierarchy in the TOC)
 - Status (move the topic from Publish to the Draft mode or vice-versa)
4. Apart from the commonly used parameters listed above, Quick Edit allows you to change a few more parameters as displayed here:

The form is divided into several sections: 'QUICK EDIT' with fields for Title, Slug, Date, Author, and Password; 'Documentation Categories' with a list of categories and checkboxes; 'Parent' with a dropdown menu; 'Order' with a text input; 'Status' with a dropdown menu; and 'PERMALINK MANAGER' with a 'Current URI' field. There are 'Cancel' and 'Update' buttons at the bottom.

5. Click **Update** to save your changes.
