
Creating links to sections within a topic

An anchor lets you create links to sections in a topic so that you can jump to a particular section within the topic. You can place an anchor on any content block: headings, paragraphs, links, images, and so on.

Perform the following steps to create an anchor link:

1. [Create an anchor](#)
2. [Add a link to the anchor](#)

Create an anchor

1. [Opening a topic in Edit mode.](#)
2. Place your cursor on the section for which you want to add the link (anchor).

The screenshot shows the documentation editor interface. On the left, there's a sidebar with navigation options like Dashboard, Documentation, FAQs, Media, Shortcodes, Pages, and Profile. The main content area shows a document with a heading 'Dashboard' and some text. A red dashed arrow points to a specific block in the document with the text: "Place your cursor on the block for which you want to add the anchor". Below this, there's a note: "Option 2: Open from documentation list". On the right, the 'Block' tab is selected in the right-hand pane, and the 'Advanced' section is expanded. The 'HTML anchor' field contains the text 'option2'. A red dashed arrow points to this field with the text: "Add the anchor text here".

3. In the right-hand pane, click the **Block** tab, and expand the **Advanced** section.
4. Enter the Anchor text.
5. Tip: Anchor text is a single word that best describes the block for which you are adding the anchor (link).

Now that you have an anchor, you need to add a link to point to that anchor. You can then jump to the anchored section by clicking that link.

Add a link to the anchor

1. Press Ctrl-K or select the link icon from the toolbar.

2. To include an anchor: Enter # followed by the anchor text.

For example, #option2.

 **#option2** internal
Press ENTER to add this link
