## Creating Table of Contents (TOC)

Your help is only as good as the navigation systems you incorporate into your help site. Good navigation is the one that helps to search for the right topic in as little time as possible. The two basic navigations you can provide to your readers are Table of Contents (TOC) and Search.

This topic provides information on how to create a TOC on Infinity.

1. Go to **Documentation > Tree View**.
2. Your topics appear one below the other in a tree form.

3. To arrange the topics in a hierarchy, place your mouse pointer on the topic icon. You'll see your mouse pointer change to a crosshair. Now click and drag the topic to the appropriate place. You can either drag the topic up or down at the same level or drag it inside another topic to make it a child topic.
