
Using Tables

Sample Table 1

Issue Category	Description
LoginAdmin	After double-clicking the LoginAdmin (user management) shortcut, the application starts with some delay of 4 to 5 seconds. The delay is because the application checks the folder structure and accessibilities to the folders. While logging out as well, the application takes some time to take a backup before closing.
ipvPClass	If the Auto backup feature is enabled, the application takes some time to close as it needs to take the backup before closing. If the backup path is set to a folder on the server, the application takes more time depending on the server connection speed.
Analysis performance	The following two analysis methods use iterative functions: Enhanced Particle Identification Enhanced User Defined Although the analysis results using these methods are very good, the time required to perform the analysis is a little more (a few seconds) depending on the captured image size and the system hardware.
